

Project Synopsis/Project Concept Document

Project number	22
Project Title	<i>Scrap shut</i>
Document	DASS Project#24 Concept Document
Creation date	<i>21/01/2020</i>
Created By	<i>Avani, Apoorva, Parv, Siddharth</i>
Client	<i>Mounikesh - Founder and TechLead of Scrapshut</i>

Description

ScrapShut is a web platform where users can rate and review anything over the internet. Based on the rating it will be easier to find & curb fake articles and project genuine articles. We store the rating & review data and use it to train our machine learning models to predict and alert future user from bogus & baseless articles. This is of utmost importance in the current market as content we read has no explicit rating.

Currently there is no mainstream website where people can rate the “core truth” and “credibility” of articles and there is a need for a reliable tool of this kind.

Profile of Users

For every internet user who uses the WWW as their source of news. Scrapshut's interface is simple and self-explanatory.

Usage Model and Diagrams - Workflow
